

Purpose of the network:

The purpose of the final network was to support an entertainment night, allowing users to watch films, listen to music, and play games smoothly without interruptions.

Why the final network is suitable:

The final network is suitable because it provides fast and stable connectivity for multiple activities at the same time, such as streaming and gaming. The test results show that the network performs well. For example, the average ping on WiFi was **12.9 ms**, which is low enough for smooth streaming and online use, while the average ping on Ethernet was **0.879 ms**, showing a very fast and reliable connection for gaming. These results demonstrate that the network is efficient and meets the requirements of the entertainment scenario.
